RE: permit # # 2007-042, 8140 West Mercer Way 98040

Attached are revisions to our plan set. During the revision process the decision was made to eliminate the retaining wall and backfill that created a new entry court. Instead, to simplify the construction, we are proposing an entry deck that clearspans from house to concrete block (containing steps and a fountain) that runs along the edge of the driveway. This enables us to leave the existing rockeries in place while creating a structural bearing situation only along the driveway edge where competent native sand was found about 3' down – see attached geotechnical statement of risk.

All other revisions have been addressed on-line.

Please feel; free to call or email with any questions.

Sincerely,

Greg Andrews
