Addenda

- I. Tree Location Map
- II. Tree Assessment Summary Table
- III. Basic Tree Risk Assessment Forms
 - IV. Mercer Island Check list
- V. Mercer Island Tree Inventory Form

1. Introduction

I was contacted by Jon Tellefson of Seascape Homes to describe and assess the condition, viability and protection of trees on Lot 4, 5250 Forest Avenue, Mercer Island, WA. This report summarizes my observations and conclusions.

2. Competence

- Certified Arborist (International Society of Arboriculture, ISA #23136, PN 0426 A)
- Registered Consulting Arborist (American Society of Consulting Arborists #499).
- Tree Risk Assessment Qualified (ISA).
- Certified forester (Society of American Foresters #951)
- Bachelor of Science degree in Forest Management from the University of Washington
- Licensed Washington State Real Estate Managing Broker #11534

3. Client

The client to whom this report is addressed is:

Jon Tellefson Seascape Homes PO Box 40568 Bellevue, WA 98105 Jmt1231@gmail.com

4. Assignment, Purpose and Use of Report

The assignment is to describe and assess the condition and viability of on-site trees and to provide protection recommendations in conformance with the City of Mercer Island "Tree Submittal Check List", attached.

5. Limits of Assignment

The assignment is limited to the information gathered during the site visit May 20, 2020 (date of assessment) and references noted in this report. No excavation or sampling was undertaken to determine unseen defects. No inspection of trees not reported herein was made.

A site plan indicating a proposed development plan was provided and is included in the Addenda with tree locations noted.

6. Site Description

Lot 4, 5202 Forest Ave SE, Mercer Island, WA, King County Parcel No. 1410300063. The subject property consists of a single-family residence on 16,396 square feet.

A single-family residence is planned for the site.

7. Methodology

Each tree was measured for diameter at 4.5-feet above ground, (or equivalent) total height, percentage of live green crown, and dripline (extent of live limbs).

Each tree was assessed as to its condition, or vigor and viability:

Vigor or condition:

Health: Biotic

- Good: No evidence of fungal infection or decay; expected to survive without disturbance to its normal life expectancy. (40-100 years in this case)
- Fair: Tree has initial fungal decay or evidence of insect habitat and is less likely to survive to normal life expectancy. Some with minor defects, are rated viable,
- Poor: Tree has significant fungal decay and defects that render it not likely to survive three years.

Structural: Abiotic

- Good: no significant abiotic or mechanical defects
- Fair: less than preferred form, defects such as breaks in the bole, poor limb attachments, included bark, poor root contact, etc.
- Poor: Broken or cracked bole or limbs; root plate compromised

Viability:

• A measure of whether the tree is likely to live to its "normal" life span or has defects limiting that potential or poses a risk to the residence or proposed development is a simple 'yes/no' rating.

8. Tree Description

Refer to the attached Tree Assessment Summary Form. A total of fourteen on-site trees as indicated on the Site Plan provided were found. They are classified by the City Municipal Code (MICC) 19.10 –"Trees" as indicated following in Table 1.

 Species
 Exceptional
 Large
 Small

 W. red cedar
 1
 1
 1

 Bigleaf maple
 3
 2
 1

 W. Hemlock
 3
 3

 Douglas-fir
 1
 1

 Cascara
 1
 1

Table 1- Tree Classifications

Three trees, No. 1 and 2, both bigleaf maples and 6, a western hemlock are non-viable., No. 6 is located away from potential targets and can be retained. Trees 1 and 2 will become high risk hazards once the house is constructed and should be removed.

Trees No. 1 and 2 are within the proposed building foot print. No replacement is required per (MCC 19.10.070) Basic Tree Risk Assessment forms are attached for both trees.

9. Root Zone Impacts

The limits of disturbance are determined on a case by case basis for each tree in consideration of the tree size, estimate of the extent of the root zone and consideration of the planned root zone disturbance. Distances from the face of each tree to the excavation limit were provided by the client. There appears to be little or no impact to the retained trees.

Tree No. 3 is measured at 11.5 feet east of the excavation zone. This encroachment into the root zone will affect about 30-percent of the entire zone and about 9-percent of the critical root zone. Post construction, this over-mature tree will overhang the house.

Facing Root Zone Critical Root No. **Species** Measured Excavation Dripline Zone Impact Distance to Type Impact Excavation (963/3217)(75/804)Limit 3 11.5 **Bigleaf** 32' Site $\pm 30\%$ $\pm 9\%$ maple leveling

Table 2 – Root Zone Impacts

In my opinion, Tree No. 3 should be removed prior to construction as the root structure will be significantly impacted by excavation and will overhang the house once that is built.

11. Discussion

The tree removal plan will retain 90-percent (9 of 11 of the total large regulated trees) and 73-percent of the total trees on the site.

12. Replacement Trees

The trees to be removed are big leaf maple that are very large and over-mature, are susceptible to dead limb drop and scaffold limb and whole tree failure. No trees are required to replace trees No. 1 and 2 as they are non-viable and will constitute high risk hazards, post construction. Tree No. 3 should be removed as root zone impacts will compromise long term health. Proposed locations are shown on the attached tree location map. Recommended native replacements are:

Pacific DogwoodCornus nuttalliDouglas-firPsuedotsuga menziesiiCascaraRhamnus purshianaWestern red cedarThuja plicata

Table 3 – Replacement Trees

Per MCC 19.10.070 replacement trees must be at least 6-feet tall for the Douglas-fir and Western red cedar and 1.5-inches in diameter at the base for the Dogwood and Cascara. These are to be maintained for a period of 5 years after establishment.

13. Summary

Nine of the thirteen on-site trees are healthy and structurally sound indicating full-term viability. Two high risk hazard trees and one viable but potentially compromised tree will be removed. The remaining trees should be protected.

Retained Tree protections should include:

- Certified Arborist on site during excavation activities within the defined root zone of all trees.
- All trees to be retained are to be fenced at the edge of the recommended tree protection zone with 6-foot high cyclone type fencing.
- Utility lines should be bored. Bore access pits to be developed with 18" buckets or hand dug.
- Retaining wall footings to be minimally deep, no more than 12-inches.
- Tree roots over 1-1/2 inches in diameter encountered in all excavations are to be cut cleanly to the trench wall with clean sharp tools. Roots to be covered with soil or wetted burlap if they must remain exposed.
- Supplemental irrigation is to be provided during summer months (generally June-September) for all trees in the construction zones.

- Recommended protected tree root zones are to be covered with 4-inches of hog fuel at all times. Where machinery access is needed, the root zones should be covered with 12-inches of hog fuel, plywood or steel sheets.
- Stumps for trees to be removed are to be ground out (not excavated).

13. Assumptions and Limiting Conditions

- 1. Any legal description provided to the consultant is assumed to be correct. Ownership of the subject trees as provided by the client is assumed to be correct. No responsibility is assumed for legal matters. No opinion as to the property line location is made.
- 2. Care has been taken to obtain all information from reliable sources. The consultant can neither guarantee nor be responsible for the accuracy of information provided by others.
- 3. The consultant shall not be required to give testimony or attend court by reason of this report unless subsequent contractual arrangements are made, including additional fees.
- 4. This report and any values expressed herein represent the opinion of the consultant, and the consultant's fee is in no way contingent upon the reporting of a specified value, a stipulated result, the occurrence of a subsequent event, nor upon any finding to be reported.
- 5. The exhibits in this report are included to assist the reader and are not necessarily to scale
- 6. Unless expressed otherwise, information in this report covers only items that were examined, and reflects the condition of those items at the time of inspection. The subject site was cleared of all vegetation at the time of inspection therefore the extent of removals is inferred from adjacent undisturbed areas. The inspection is limited to visual examination of accessible portions of the trees and plants.
- 7. Loss or alteration of any part of the report invalidates the entire report. Ownership of any documents related to this report passes to the client only.
- 8. The liability of ArborInfo LLC its contractors and employees is limited to the client only and only up to the amount of the fee actually received for the assignment.
- 9. There is no warranty suggested for any of the trees subject to this report. Weather, latent tree conditions, and future man-caused activities could cause physiologic changes and deteriorating tree condition. Over time, deteriorating tree conditions may appear and there may be conditions, which are not now visible which, could cause tree failure. This report or the verbal comments made at the site in no way warrant the structural stability or long-term condition of any tree, but represent my opinion based on the observations made.

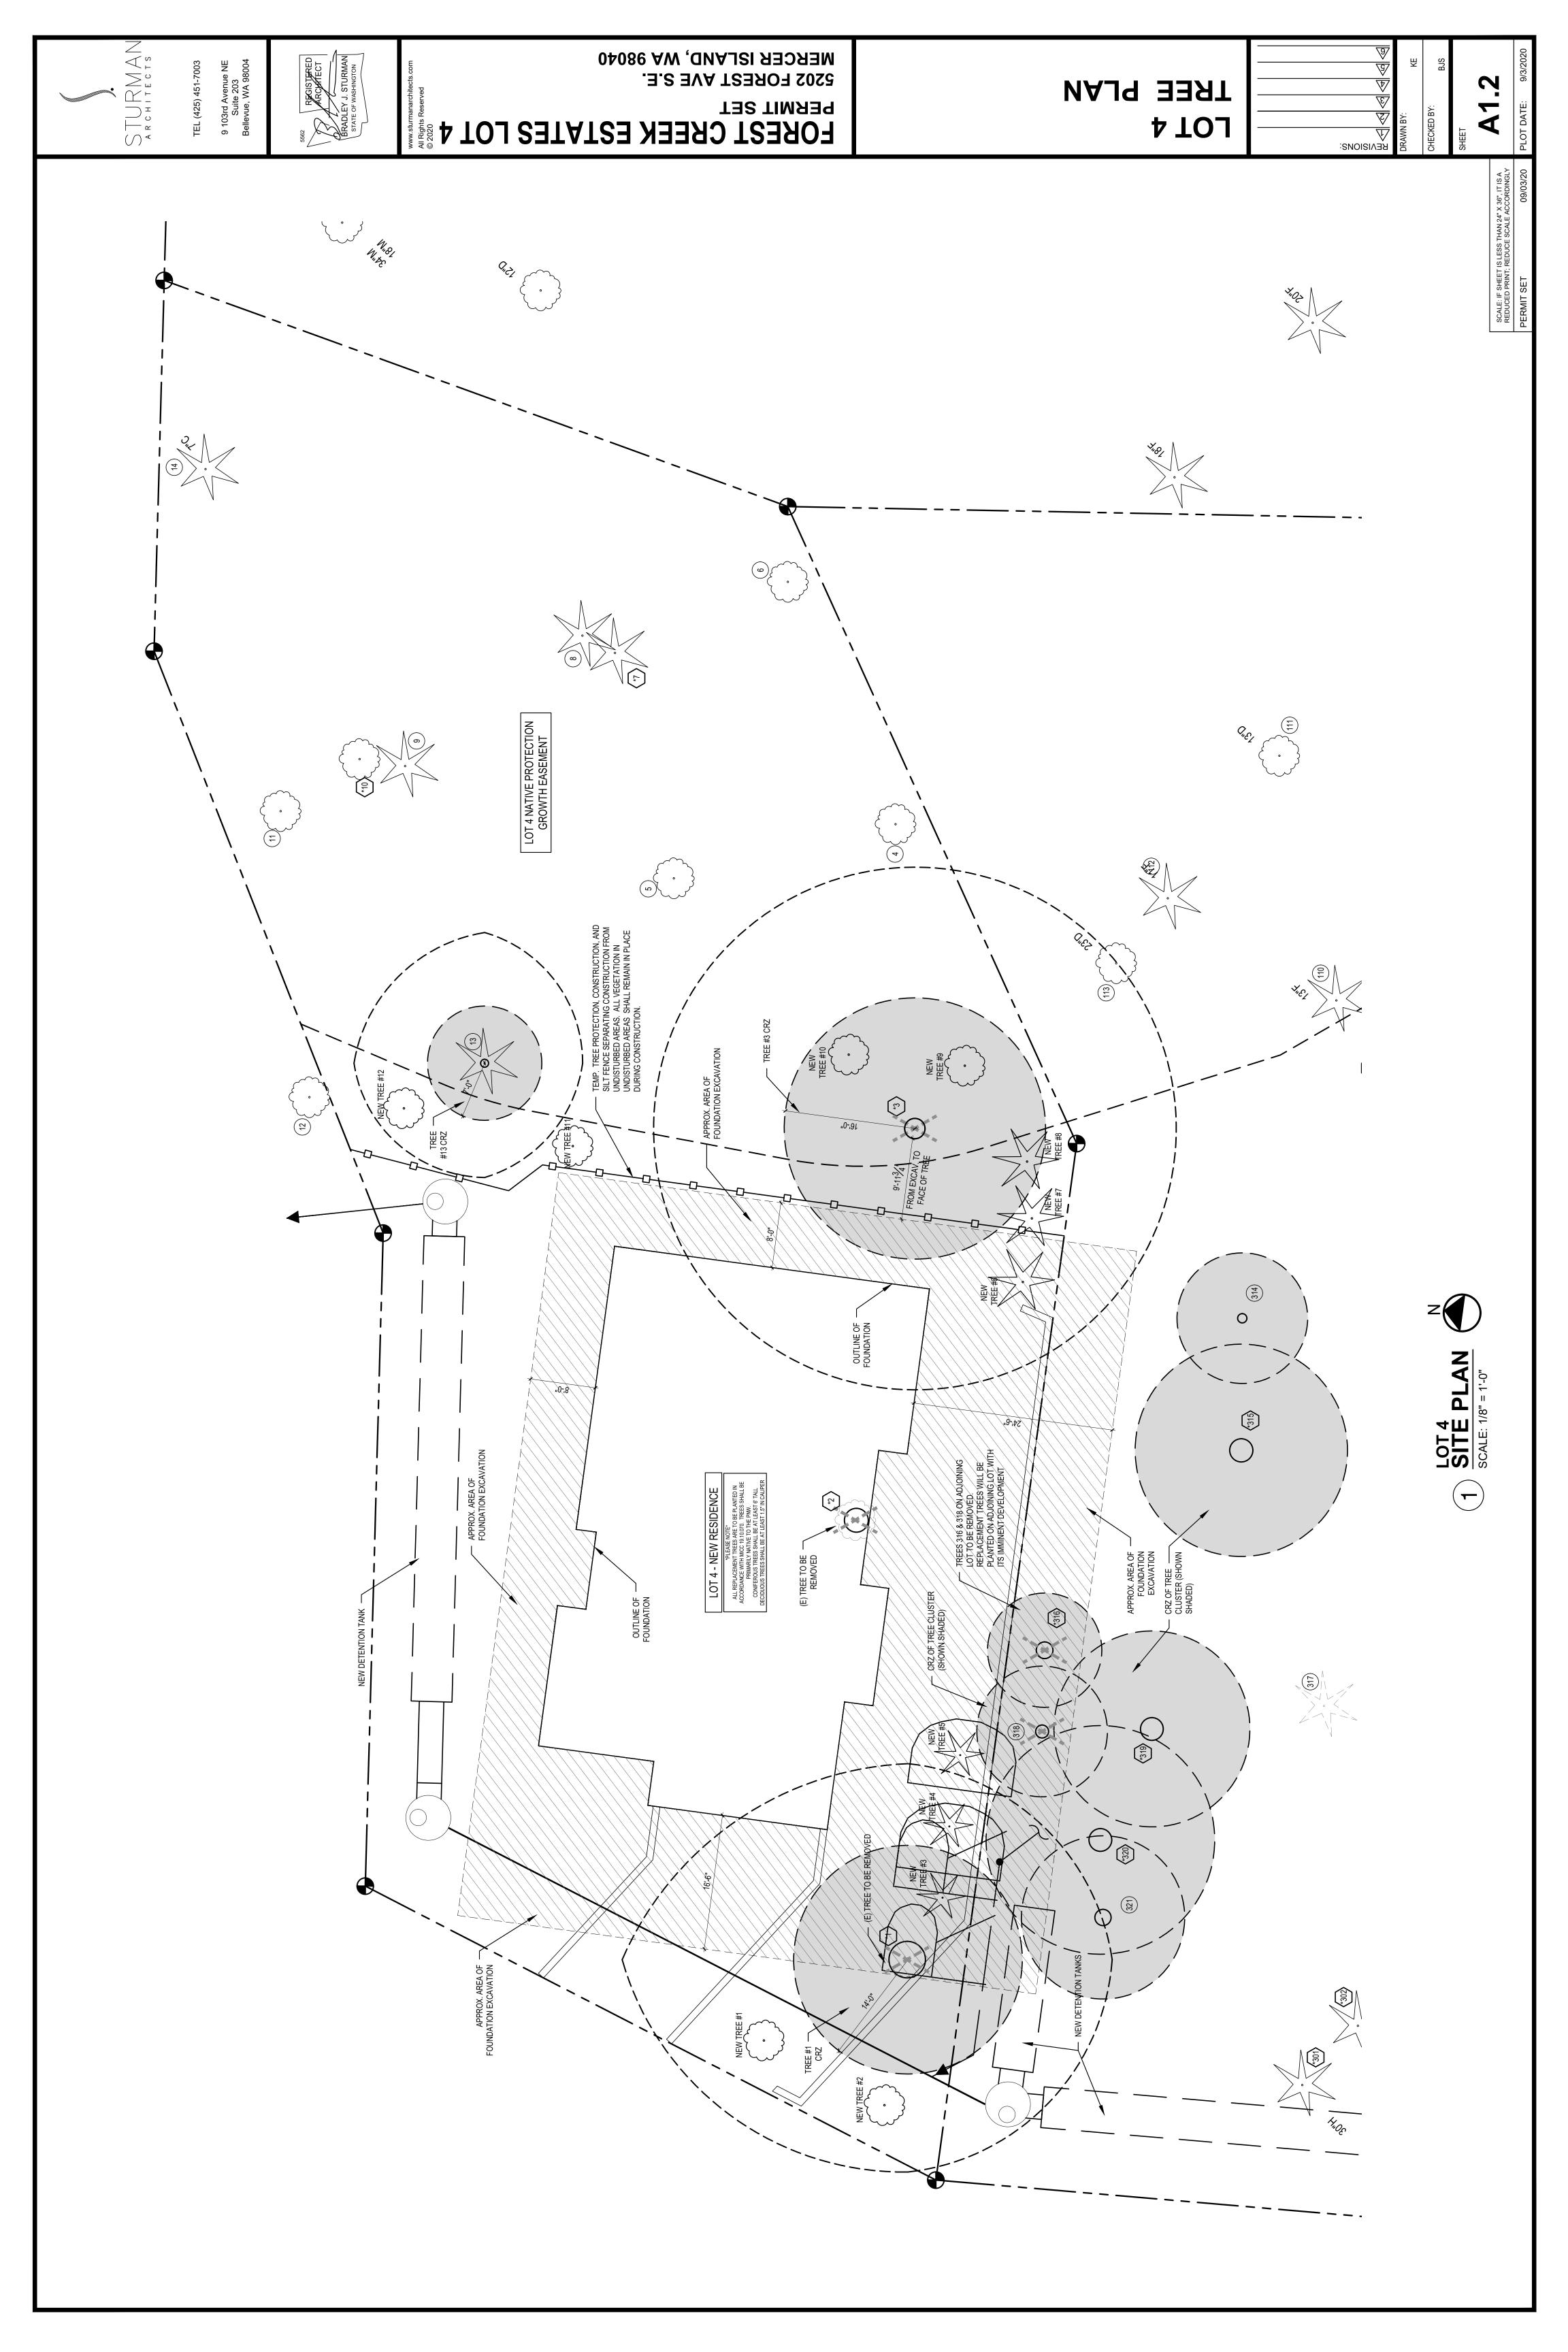

- 10. Nearly all trees in any condition standing within reach of improvements or human use areas represent hazards that could lead to damage or injury. The assessment is valid for two years from the date of inspection, only.
- 11. PERTINENT JURISDICTION RULES AND REGULATIONS SHOULD BE CONSULTED PRIOR TO THE REMOVAL OF ANY TREE.

Respectfully Submitted,

Tom Hanson

Thomas M. Hanson, CF, RCA

TREE INVENTORY & REPLACEMENT SUBMITTAL INFORMATION

EXCEPTIONAL TREES Exceptional Trees- means a tree or group of trees that because of its unique historical, ecological or aesthetic value constitutes an important community resource. A tree that is rare or exceptional by virtue of its size, species, condition, cultural/historical importance, age, and/or contribution as part of a tree grove. Trees with a diameter of more than 36 inches, or with a diameter that is equal to or greater than the diameter listed in the Exceptional Tree Table shown in MICC 19.16 under Tree, Exceptional. List the total number of trees for each category and the tree identification numbers from the arborist report. Number of trees 36" or greater List tree numbers: Number of trees 24" or greater (including 36" or greater) List tree numbers: Number of trees from Exceptional Tree Table (MICC 19.16) List tree numbers: **LARGE REGULATED TREES** Large Regulated Trees- means any tree with a diameter of 10 inches or more, and any tree that meets the definition of an Exceptional Tree. Number of Large Regulated Trees on site (A) List tree numbers: Number of Large Regulated Trees on site proposed for removal (B) List tree numbers: Percentage of trees to be retained ((A-B)/Ax100) note: must be at least 30% **RIGHT OF WAY TREES** <u>Right of Way Trees</u>- means a tree that is located in the street right of way adjacent to the project property. Number of Large Regulated Trees in right of way List tree numbers:

Number of Large Regulated Trees in right of way proposed for removal

List tree numbers:	
Reason for removal:	
•	

TREE REPLACEMENT

Tree replacement- removed trees must be replaced based on the ratio in the table below. Replacement trees shall be conifers at least six feet tall and or deciduous at least one and one-half inches in diameter at base.

			Number of Tree
	Tree	Number of	Required for
Diameter of Removed Tree (measured 4.5'	replacement	Trees Proposed	Replacement Based

TREE SUBMITTAL CHECKLIST

If a box is checked, please provide the information in your next submittal

			SUBMITTAL ITEMS
1.	The	Merce	er Island Tree Inventory Form
	Prov	ide th	ne City's Mercer Island Tree Inventory Form
2.	Arbo	orist re	eport/tree inventory
		ide ar rist re	n Arborist report, prepared by a qualified Arborist. Include the following information in the
	1.		cription of how the arborist meets the threshold requirements for Qualified Arborist.
	2.	А со	emplete description of each tree's diameter, species, critical root zone, limits of allowable urbance, health, condition, and viability.
	3.		scription of the method(s) used to determine the limits of allowable disturbance (i.e., critical zone, root plate diameter, or a case-by-case basis description for individual trees).
	4.	prote	special instructions specifically outlining any work proposed within the limits of disturbance ection areas (i.e. hand-digging, air space, tunneling, root pruning, any grade changes, ring, monitoring, and aftercare).
	5.	high spec	crees not viable for retention, a description of the reason(s) for removal based on poor health, risk of failure due to structure, defects, unavoidable isolation, windfirmness, unsuitability ries, etc. If there is no reasonable alternative action (pruning, cabling, etc.) possible, accement recommendations must be given.
	6.		cribe the impact of necessary tree removal on the remaining trees, including those in a grove n adjacent properties.
	7.		cribe timing and installation of tree protection measures. Such measures must include ing and be in accordance with the tree protection standards as outlined in MICC 19.10.
	8.		suggested location and species of replacement trees to be used when required. The report linclude planting and maintenance specifications to ensure long term survival.
	9.		ee Inventory containing the following:
		a.	A numbering system of all existing large trees on the property (with corresponding tags on trees). The inventory shall also include large trees on adjacent property with driplines or critical root zones extending into the property.
		b.	Tree size (diameter). Where a tree splits into several trunks close to ground level, the dbh (Diameter at Brest Height) for the tree is the square root of the sum of the dbh for each individual stem squared (example with 3 stems: dbh = square root [(stem1)2 +(stem2)2 +(stem3)2]).
		c.	Proposed tree status (retained or proposed for removal).
		d.	Tree type or species.
		e.	Identify all Exceptional trees and differentiate between those less than 24 inches and those greater than or equal to 24 inches in diameter.
		f.	Brief general health or condition rating of each tree (i.e. poor, fair, good, etc.).

3. Site/tree retention plan

Indicate the following on all civil/utility and grading sheets. If there are no civil sheets indicate on the architectural site plan

	1.	Location of all proposed improvements (building footprint, access, utilities, buffers, required
	2.	landscape areas). Surveyed location of all large trees and Exceptional trees on the property
	3.	Show the critical root zone of Large trees on adjacent properties if driplines extend over the
Ш	Э.	subject property line.
	4.	Trees labeled corresponding to the tree inventory numbering system on the Mercer Island Tree
	••	Inventory Form.
	5.	Identify Exceptional trees using different symbols for trees less than 24 inches and trees greater
		than or equal to 24 inches.
	6.	Location of tree protection measures.
	7.	Limits of excavation near potential saved trees (e.g. excavation limits for building foundation).
	8.	Indicate clearing limits/limits of disturbance (LOD) around all trees potentially impacted by site
		disturbances - grading, demolition, construction activities (including approximate LOD of off-site
		trees with overhanging driplines), etc.
	9.	Proposed tree status (trees to be removed or retained) noted by an 'X' for removal.
4.	Repl	anting plan
Ш	Prov	ide the Replanting plan showing proposed locations of any required replacement trees.
PEER	REVI	EW AND CONFLICT OF INTEREST
A pe	er rev	iew of the tree permit application by a qualified arborist may be required to verify the adequacy
•		rmation and analysis. The applicant shall bear the cost of the peer review.
	•	rborist may require the applicant retain a replacement qualified arborist or may require a peer ere the City Arborist believes a conflict of interest may exist.
For e	examp	ple, if an otherwise qualified arborist is employed by a tree removal company and prepares the
		eport for a development proposal, a replacement qualified arborist or peer review may be
requ		
ARB	ORIST	QUALIFICATION
For t	roo ro	eviews associated with a development proposal, a qualified arborist must have
roi t		inimum of three (3) years' experience working directly with the protection of trees during
•		truction
		experience with the likelihood of tree survival after construction
•		·
•		ble to prescribe appropriate measures for the preservation of trees during land development ree Risk Assessment Qualification
_		·
Ш	Your	qualified arborists must have at least one (1) of the following credentials:
	•	ISA Certified Arborist;
	•	ISA Certified Arborist Municipal Specialist;
	•	ISA Board Certified Master Arborist;
	•	American Society of Consulting Arborists (ASCA) registered Consulting Arborist;
	•	Society of American Foresters (SAF) Certified Forester for Forest Management Plans;
