Subject: Geotechnical Review of Proposed Tree Watering
Proposed New Residence
3064 – 68th Avenue SE
Mercer Island, Washington

Dear Mr. Franklin:

Per the request of Ms. Kayla Jorgensen of Root of Design LLC, GEO Group Northwest, Inc. has reviewed the proposal to use a temporary irrigation system with drip bubblers for a minimum of 5 years for six new (replacement) trees at the subject property. These trees will be located on a slope area that is beyond and uphill from the eastern limits of development associated with the construction of a new residence on the property.

Upon our review of the geologic and topographic conditions and of the details of the proposed development activity, it is our opinion the proposed watering system is acceptable from a geotechnical perspective and has minimal risk of adversely affecting stability of the site property or adjacent property.

Please feel welcome to contact us if you have any questions regarding this letter.
