SUBJECT: Wetland Reconnaissance for Wellmon Remodel - 6333 - 77th Ave. SE

Parcel 409710-0010, Mercer Island, WA (Revised)

Dear Matt:

We have updated this report to address the comments presented in the August 14, 2023 memorandum from ESA, peer review consultant for the City of Mercer Island. As part of ESA's review they requested additional information regarding how the site is in compliance with the City's Shoreline Master Program (MICC 19.13), specifically how there will be no net loss of ecological shoreline function associated with an increase in impervious surface.

Background

On February 28, 2023 I conducted a wetland reconnaissance on the subject property located on Lake Washington utilizing the methodology outlined in the May 2010 Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region (Version 2.0). No wetlands or streams were identified on or adjacent to the property during the field investigation. The no wetlands or streams determination has been confirmed by ESA.

The site is currently entirely developed with a single-family residence and associated maintained yard. A rock wall is located along the entire shoreline except for a small gravel beach in the northwest portion of the property in the vicinity of an existing dock.

No intact native plant communities are located on the site and no vegetation was observed below the rock wall within the lake. Plant species on the property are generally limited to scattered ornamental tree and shrub plantings and mowed grass, Himalayan blackberry (*Rubus armeniacus*) and English ivy (*Hedera helix*) to the water's edge. No definitive hydrophytic plant communities were observed on or adjacent to the property.

Borings taken on the site revealed higher chroma non-hydric soils and there was no evidence of ponding or prolonged soil saturation anywhere in the vicinity of the property above the rock wall and beach. **Attachment A** contains a data sheet prepared for a representative location in the upland on the site. This data sheet documents the vegetation, soils, and hydrology information that aided in the no wetland determination for the property.

Shoreline Ecological Function

The City of Mercer Island requires that there is no net loss of ecological shoreline function as part of a proposed project within shoreline jurisdiction.

Per MICC19.13.020.C: No net loss standard and mitigation sequencing. No development shall be approved unless the applicant demonstrates to the code official's satisfaction that the shoreline development will not create a net loss of ecological function in the shorelands.

- 1. Standards presumed to meet no net loss. When all individual development standards that apply to a development project do not explicitly require a determination of no net loss and the project conforms with all such standards, there is a rebuttable presumption that the project does not create a net loss of ecological function to the shorelands.
- 2. No net loss plan. Whenever an applicant seeks a variance or conditional use permit or an applicable development standard explicitly requires a determination of no net loss of ecological function, the applicant shall provide the city with a plan that demonstrates the proposed project will not create a net loss in ecological function to the shorelands. The plan shall accomplish no net loss of ecological function by avoiding adverse ecological impacts that are not reasonably necessary to complete the project, minimizing adverse ecological impacts that are reasonably necessary to complete the project, and mitigating or offsetting any adverse impacts to ecological functions or ecosystem-wide processes caused by the project. The code official may require the plan to include reports from qualified professionals with expertise in ecological function. The plan's compliance with the no net loss requirement may be considered through the SEPA process.
- i. Off-site mitigation permitted. While on-site mitigation is preferred, off-site mitigation may be permitted at the discretion of the code official.
- ii. Demonstration of no net loss supported by a qualified professional. The code official may require any applicant to provide reports by qualified professionals that demonstrate to the code official's satisfaction that the applicant's proposed plan avoids a net loss in ecological function.

Currently the area adjacent to the shoreline is primarily lawn and scattered ornamental plantings that do not provide a significant functional benefit to the shoreline. The area does not provide significant functional habitat or stormwater filtration. Although there will be an increase in impervious surface on the site over

Matt Mamiya September 20, 2023 Page **3** of **4**

existing conditions, this new impervious surface will occur away from the shoreline and outside of the 50-foot setback from the Ordinary High Water.

As mitigation for the increased impervious surface, a shoreline enhancement plan has been prepared by ANR Landscape Design. The planting plan has been designed to increase the habitat value of the area adjacent to the shoreline by increasing the plant species and structural diversity over existing conditions. Native vegetation would be planted directly adjacent to the bulkhead to provide some natural shade and cover adjacent to the lake edge. The plantings will also contribute detritus and other desirable allochthonous inputs into the aquatic environment.

In addition, the native plantings should also increase stormwater functions through infiltration and pollutant removal.

Conclusion

No wetlands were identified on or immediately adjacent to the site. This determination is based on a field investigation during which no definitive hydrophytic plant communities, hydric soils, or evidence of wetland hydrology were observed. In addition, the proposed project includes a shoreline planting plan that will increase the habitat and infiltration functions of the area adjacent to the shoreline over current conditions.

If you have any questions, please give me a call.

Sincerely,

ALTMANN OLIVER ASSOCIATES, LLC
