Project Narrative for Critical Area Determination

6660 East Mercer Way

Permit No. 1902-005

The Yang project is to demo the existing structure and construct a new SFR. Critical Areas study and plans are part of this submittal for a reduction to a watercourse buffer. The watercourse is a piped drainage line servicing properties above this project. The piped drainage line will not be altered and maintained as is.

Sincerely, Richard A Fisher

Project Architect
