Zoning District	R-8.4
SEPA Compliance:	Exempt per WAC 197-11-800(6)(e)
Staff Contact:	Lauren Anderson, Planner

INTRODUCTION

1. Application Description:
The proposal is a significant remodel and story addition that involves the removal of the entry level walls down to the foundation and at the floor framing above the daylight basement below. The downhill side of the house will be three (3) stories. The existing house has a gross floor area of 3,352 square feet and the new proposed house will be 4,370 square feet. For the proposed development, the applicant has a building permit application under review, #1808-172.

2. Zoning & Adjacent Land Use:
The site gently slopes down to the west and has three existing trees within the 35-foot watercourse buffer. The lot and surrounding lots are zoned R-8.4 residential and are single-family residential. The existing home sits within the existing 35-foot buffer of an existing type 3 watercourse that is located on the western neighbor's property. The proposal is to do buffer averaging and reduce the buffer where the remodel and existing house exists.

3. SEPA Compliance:
The proposal is categorically exempt from SEPA (State Environmental Policy Act) review per WAC 197-11-800(6)(e).

4. Consistency with Land Use Code/Zoning Requirements:
A Critical Areas Determination for watercourse buffer averaging is a type III (3) land use review per MICC 19.15.030 Table A. The applicant has applied for a Critical Areas Determination to average the width of the watercourse buffer by removing 141 square feet from the southwest portion of the lot and relocating the 141 square feet of buffer to the northwest portion of the lot. The watercourse buffer enhancement area is 187 square feet and consists of native vegetation (red currant and snowberry).

The City's GIS map (Exhibit 7) indicated that the watercourse was a type 2 watercourse, however the City's peer reviewer (ESA) Ecologist and the applicant's Ecologist (AOA, LLC) have found that it is a type 3 watercourse with a 35-foot associated buffer. Please refer to Exhibit 3 and 5, and the analysis below in the Findings of Fact and Conclusions of Law #8.

Findings of Fact & Conclusions of Law

5. Application Date, Letter of Completion, Vesting:
The applicant applied on May 6, 2019 and the application was deemed complete on May 30, 2019. Due to the application being a type III land use review, per MICC 19.15.170(B) it vests on the date of completion.

6. NOA, Review Process, Comment Period:
Type III land use reviews per MICC 19.15.030(Table B) require public notice of application (NOA) which includes the following: weekly bulletin notice, 300-foot mailing, 30-day comment period and sign posted near the site. The public NOA was issued on June 3, 2019 and the 30-day comment period went until 5pm on July 3, 2019. The City received no public comments during this time or afterwards.

7. Site Visit Finding:
City Planner Lauren Anderson and Jessica Redman from ESA (Environmental Science Associates, peer reviewer) conducted a site visit on August 5, 2019. Refer to Exhibit 6 site visit photographs of the backyard (western portion) of the lot and looking over the fence. The watercourse looked to be a ditched channel and no flow was observed. Refer to Exhibit 5 for ESA's review memo with ESA's recommendations and findings.

8. SEPA Finding of Fact and Conclusions:
Categorical exemption finding pursuant to WAC 197-11-800(6)(e). In addition, the watercourse is located on the neighbor's property, thus the site is not considered lands covered by water.

9. Critical Areas:

MICC 19.07.070 has the watercourse requirements for typing, buffer size and buffer averaging. This code is copied below with staff analysis in italic text.

A. Watercourses – Designation and Typing. Watercourses shall be designated as Type 1, Type 2, Type 3 and Restored according to the following criteria:
   1. Type 1 Watercourse. Watercourses or reaches of watercourses used by fish, or are downstream of areas used by fish.

2. Type 2 Watercourse. Watercourses or reaches of watercourses with year-round flow, not used by fish.
3. Type 3 Watercourse. Watercourses or reaches of watercourses with intermittent or seasonal flow and not used by fish.
4. Restored Watercourse. Any Type 1, 2 or 3 watercourses created from the opening of previously piped, channelized or culverted watercourses.

B. Watercourse Buffers.

1. Watercourse Buffer Widths. Standard buffer widths shall be as follows, measured from the ordinary high water mark (OHW), or top of bank if the OHW cannot be determined through simple nontechnical observations.

Watercourse Type	Standard (Base) Buffer Width (feet)	Minimum Buffer Width with Enhancement (feet)
Type 1	75	37
Type 2	50	25
Type 3	35	25
Restored or Piped	25	Determined by the code official

Staff Analysis: The applicant's Ecologist, Altmann Oliver Associates (AOA) found that "since Stream 1 does not contain fish habitat and conveys only seasonal or intermittent flows, it meets the criteria for a Type 3 watercourse per MICC 19.07.070.A (Exhibit 3, page 2)." In addition, the City's peer reviewer, ESA agreed with AOA's findings that it is a type 3 watercourse which has a 35-foot standard buffer. ESA stated the following: "ESA and City staff observed the watercourse from the project parcel during the August 5, 2019 site visit. The watercourse appeared to be a ditched channel that was dug to primarily convey stormwater. No flow was observed during the August site visit. Stream substrate was primarily soil and no fish habitat was observed. Based on the stream characteristics and the location of the parcel near the start of a deep ravine, we also agree that the stream would not support fish and therefore, is a Type 3 watercourse, which would be allotted a 35-foot buffer (Exhibit 5, page 2)."

…..

3. Averaging of Buffer Widths. The code official may allow the standard buffer width to be averaged if:
   a. The proposal will result in a net improvement of critical area function;
   b. The proposal will include replanting of the averaged buffer using native vegetation;
   c. The total area contained in the averaged buffers on the development proposal site is not decreased below the total area that would be provided if the maximum width were not averaged
   d. The standard buffer width is not reduced to a width that is less than the minimum buffer width at any location; and
   e. That portion of the buffer that has been reduced in width shall not contain a steep slope.

Staff Analysis:

a. As shown in Exhibit 3 and Exhibit 5, ESA and AOA Ecologist's both found that the proposal will result in a new improvement of watercourse function. The proposal includes permanent removal of

impervious surface within the buffer and native vegetation plantings. ESA states the following: "Based on our review of the AOA Report and MICC, as well as the site visit, ESA concludes the proposed buffer addition and enhancement with native plantings will improve buffer conditions at the site and result in an ecological lift in functions [Exhibit 5, page 3]."

b. *As shown in Exhibit 1 page 11, eleven one-gallon red currant and eleven one-gallon snowberry will be planted within the enhancement area. MICC 19.16 defines native vegetation as "vegetation identified by the Washington Native Plant Society or the United States Department of Agriculture as being native to Washington State. Native vegetation does not include noxious weeds." Red currant and snowberry are identified by the United States Department of Agriculture as being native to Washington State.*
c. *As shown in Exhibit 1 page 10 and 11, the total area contained in the averaged buffers on the site is not decreased as 141 square feet (sf) buffer area is being reduced and 141 sf is being added.*
d. *As shown in Exhibit 1 page 10 and 11, the buffer width is not reduced to less than 25 feet (minimum buffer width) at any location.*
e. *As shown in Exhibit 1 page 5 Topographic Survey by Terrane, the reduced buffer area does not contain a steep slope.*

CONDITIONS OF APPROVAL

1. The following conditions shall be binding on the "Applicant," which shall include the owner or owners of the property, heirs, assign and successors.
2. Substantial conformance with the development plan set (Exhibit 1).
3. This permit approval shall expire three (3) years from the date of notice of decision if the activity approved by the permit is not exercised. This activity includes construction or substantial progress toward construction of a development proposal.
4. The mitigation plants shall be monitored twice (2) approximately one (1) year after plant installation (to determine survival and replacement) and five (5) years after the plant installation to ensure the mitigation actions of the project were a success.
5. The applicant shall install and have inspected full temporary erosion and sediment control measures prior to construction.

DECISION

Based upon the above noted Findings of Fact and Conclusions of Law, critical areas determination application CAO19-008, as depicted in Exhibit 1 and 3, is hereby preliminarily **APPROVED**. This decision is final, unless appealed in writing consistent with adopted appeal procedures, MICC 19.15.020(J), and all other applicable appeal regulations.

BUILDING PLANNING (CHAP. 3)

HABITABLE SPACE (IRC SECTION R202): A SPACE IN A BUILDING FOR LIVING, SLEEPING, EATING OR COOKING. BATHROOMS, TOILET ROOMS, CLOSETS, HALLS, STORAGE OR UTILITY SPACES AND SIMILAR AREAS ARE NOT CONSIDERED HABITABLE SPACES.
LIGHT, VENTILATION AND HEATING IN HABITABLE ROOMS (SECTION R303): ALL HABITABLE ROOMS SHALL HAVE AN AGGREGATE GLAZING AREA OF NOT LESS THAN 8 PERCENT OF THE FLOOR AREA OF SUCH ROOMS. NATURAL VENTILATION SHALL BE THROUGH WINDOWS, DOORS, LOUVERS OR OTHER APPROVED OPENINGS TO THE OUTDOOR AIR. SUCH OPENINGS SHALL BE PROVIDED WITH READY ACCESS OR SHALL OTHERWISE BE READILY CONTROLLABLE BY THE BUILDING OCCUPANTS. THE MINIMUM OPENABLE AREA TO THE OUTDOORS SHALL BE 4 PERCENT OF THE FLOOR AREA BEING VENTILATED.
EXCEPTIONS:
1. THE GLAZED AREAS NEED NOT BE OPENABLE WHERE THE OPENING IS NOT REQUIRED BY SECTION R310 AND AN APPROVED MECHANICAL VENTILATION SYSTEM IS PROVIDED CAPABLE OF PRODUCING 0.35 AIR CHANGE PER HOUR IN THE ROOM OR A WHOLE-HOUSE MECHANICAL VENTILATION SYSTEM IS INSTALLED CAPABLE OF SUPPLYING OUTDOOR VENTILATION AIR OF 15 CUBIC FEET PER MINUTE (CFM) PER OCCUPANT COMPUTED ON THE BASIS OF TWO OCCUPANTS FOR THE FIRST BEDROOM AND ONE OCCUPANT FOR EACH ADDITIONAL BEDROOM.
2. THE GLAZED AREAS NEED NOT BE PROVIDED IN ROOMS WHERE EXCEPTION 1 ABOVE IS SATISFIED AND ARTIFICIAL LIGHT IS PROVIDED CAPABLE OF PRODUCING AN AVERAGE ILLUMINATION OF 6 FOOTCANDLES OVER THE AREA OF THE ROOM AT A HEIGHT OF 30 INCHES ABOVE THE FLOOR LEVEL.
LIGHT, VENTILATION AND HEATING IN ADJOINING ROOMS (SECTION R303.2): FOR THE PURPOSE OF DETERMINING LIGHT AND VENTILATION REQUIREMENTS, ANY ROOM SHALL BE CONSIDERED AS A PORTION OF AN ADJOINING ROOM WHEN AT LEAST ONE-HALF OF THE AREA OF THE COMMON WALL IS OPEN AND UNOBSTRUCTED AND PROVIDES AN OPENING OF NOT LESS THAN ONE-TENTH OF THE FLOOR AREA OF THE INTERIOR ROOM BUT NOT LESS THAN 25 SQUARE FEET.
EXCEPTION: OPENINGS REQUIRED FOR LIGHT AND/OR VENTILATION SHALL BE PERMITTED TO OPEN INTO A THERMALLY ISOLATED SUNROOM ADDITION OR PATIO COVER, PROVIDED THAT THERE IS AN OPENABLE AREA BETWEEN THE ADJOINING ROOM AND THE SUNROOM ADDITION OR PATIO COVER OF NOT LESS THAN ONE-TENTH OF THE FLOOR AREA OF THE INTERIOR ROOM BUT NOT LESS THAN 20 SQUARE FEET. THE MINIMUM OPENABLE AREA TO THE OUTDOORS SHALL BE BASED UPON THE TOTAL FLOOR AREA BEING VENTILATED.
LIGHT, VENTILATION AND HEATING IN BATHROOMS (SECTION R303.3): BATHROOMS, WATER CLOSET COMPARTMENTS AND OTHER SIMILAR ROOMS SHALL BE PROVIDED WITH AGGREGATE GLAZING AREA IN WINDOWS OF NOT LESS THAN 3 SQUARE FEET, ONE-HALF OF WHICH MUST BE OPENABLE. EXCEPTION: THE GLAZED AREAS SHALL NOT BE REQUIRED WHERE ARTIFICIAL LIGHT AND A MECHANICAL VENTILATION SYSTEM ARE PROVIDED. THE MINIMUM VENTILATION RATES SHALL BE 50 CFM FOR INTERMITTENT VENTILATION OR 20 CFM FOR CONTINUOUS VENTILATION. VENTILATION AIR FROM THE SPACE SHALL BE EXHAUSTED DIRECTLY TO THE OUTSIDE.
CEILING HEIGHT (SECTION R305): HABITABLE SPACE, HALLWAYS, CORRIDORS, BATHROOMS, TOILET ROOMS, LAUNDRY ROOMS AND BASEMENTS SHALL HAVE A CEILING HEIGHT OF NOT LESS THAN 7 FEET. THE REQUIRED HEIGHT SHALL BE MEASURED FROM THE FINISH FLOOR TO THE LOWEST PROJECTION FROM THE CEILING.
EXCEPTIONS:
1. FOR ROOMS WITH SLOPED CEILINGS, AT LEAST 50 PERCENT OF THE REQUIRED AREA OF A ROOM MUST HAVE A CEILING HEIGHT OF AT LEAST 7 FEET AND NO PORTION OF THE REQUIRED FLOOR AREA MAY HAVE A CEILING HEIGHT OF LESS THAN 5 FEET.
2. BATHROOMS SHALL HAVE A MINIMUM CEILING HEIGHT OF 6 FEET 8 INCHES AT THE CENTER OF THE FRONT CLEARANCE AREA FOR FIXTURES AS SHOWN IN FIGURE R307.1. THE CEILING HEIGHT ABOVE FIXTURES SHALL BE SUCH THAT THE FIXTURE IS CAPABLE OF BEING USED FOR ITS INTENDED PURPOSE. A SHOWER OR TUB EQUIPPED WITH A SHOWERHEAD SHALL HAVE A MINIMUM CEILING HEIGHT OF 6 FEET 8 INCHES ABOVE A MINIMUM AREA 30 INCHES BY 30 INCHES AT THE SHOWERHEAD.
BASEMENTS: PORTIONS OF BASEMENTS THAT DO NOT CONTAIN HABITABLE SPACE, HALLWAYS, BATHROOMS, TOILET ROOMS AND LAUNDRY ROOMS SHALL HAVE A CEILING HEIGHT OF NOT LESS THAN 6 FEET 8 INCHES.
EXCEPTIONS:
1. BEAMS, GIRDERS, DUCTS, OR OTHER OBSTRUCTIONS MAY PROJECT TO WITHIN 6 FEET 4 INCHES OF THE FINISHED FLOOR.

EROSION CONTROL NOTES

1. PROVIDE AND MAINTAIN TEMPORARY SEDIMENTATION COLLECTION FACILITIES TO ENSURE THAT SEDIMENT OR OTHER HAZARDOUS MATERIALS DO NOT ENTER THE STORM DRAINAGE SYSTEM IN ACCORDANCE WITH THE SITE'S APPROVED CSWPPP.
2. EXPOSED SOILS SHALL BE WORKED DURING THE WEEK UNTIL THEY HAVE BEEN STABILIZED. SOIL STOCKPILES SHOULD BE SHOWN WITHIN THE DISTURBED AREA SHOWN ON THE SITE PLAN. SOIL EXCAVATED FOR THE FOUNDATION SHALL BE BACKFILLED AGAINST THE FOUNDATION AND GRADED TO DRAIN AWAY FROM THE BUILDING. NO SOILS SHALL REMAIN EXPOSED AND UNWORKED FOR MORE THAN 7 DAYS FROM MAY 1 TO SEPTEMBER 30 OR MORE THAN 2 DAYS FROM OCTOBER 1 TO APRIL 30. ONCE THE DISTURBED LANDSCAPE AREAS ARE GRADED, THE GRASS AREAS ARE TO BE AMENDED PER THE SOIL AMENDMENT NOTES ON SHEET C2. ALL STOCKPILES SHOULD BE COVERED WITH PLASTIC OR BURLAP IF LEFT UNWORKED.
3. ANY AND ALL POLLUTANTS, CHEMICALS, LIQUID PRODUCTS, AND OTHER MATERIALS THAT HAVE THE POTENTIAL TO POSE A THREAT TO HUMAN HEALTH OR THE ENVIRONMENT SHALL BE COVERED, CONTAINED, AND PROTECTED FROM VANDALISM. ALL SUCH PRODUCTS SHALL BE KEPT UNDER COVER IN A SECURE LOCATION ON SITE. CONCRETE HANDLING (BMP C151), SAWCUTTING (BMP C152), MATERIAL DELIVERY, STORAGE, AND CONTAINMENT (BMP C153), AND CONCRETE WASHOUT AREAS (BMP C154) SHOULD FOLLOW BEST MANAGEMENT PRACTICES AS PROVIDED IN VOLUME II OF THE 2014 SURFACE WATER MANAGEMENT MANUAL FOR WESTERN WASHINGTON.
4. BEST MANAGEMENT PRACTICES OR BMPs SHALL BE INSPECTED AND MAINTAINED DURING CONSTRUCTION AND REMOVED WITHIN 30 DAYS AFTER THE CITY INSPECTOR OR ENGINEER DETERMINES THAT THE SITE IS STABILIZED, PROVIDED THAT THEY MAY BE REMOVED WHEN THEY ARE NO LONGER NEEDED.

SUGGESTED SWPPP SEQUENACE

1. MARK CLEARING LIMITS, CRITICAL AREAS, AND BUFFER. THE PERIMETER OF THE AREA TO BE CLEARED SHALL BE MARKED PRIOR TO CLEARING OPERATION WITH VISIBLE FLAGGING, ORANGE PLASTIC BARRIER FENCING AND/OR ORANGE SILT FENCING AS SHOWN ON THE SWPPP SITE MAP. VEHICLE ARE ONLY ALLOWED IN THE AREAS TO BE GRADED, SO NO COMPACTION OF THE UNDEVELOPED AREAS WILL OCCUR.
2. INSTALL STABILIZED CONSTRUCTION ENTRANCE WHERE NECESSARY
3. INSTALL PROTECTION FOR EXISTING DRAINAGE SYSTEMS AND PERMANENT DRAIN INLETS
4. ESTABLISH STAGING AREAS FOR STORAGE AND HANDLING POLLUTED MATERIAL AND BMPs
5. INSTALL SEDIMENT CONTROL BMPs
6. GRADE AND INSTALL STABILIZATION MEASURES FOR DISTURBED AREAS
7. MAINTAIN BMPS UNTIL SITE STABILIZATION, AT WHICH TIME THEY MAY BE REMOVED

PERMANENT & TEMPORARY SEEDING

1. SEEDING MAY BE USED THROUGHOUT THE PROJECT ON DISTRUBED AREAS THAT HAVE REACHED FINAL GRADE OR THAT WILL REMAIN UNWORKED. SEED AND MULCH ALL DISTURBED AREAS NOT OTHERWISE VEGETATED OR STABILIZED.
2. SEED DURING SEASONS MOST CONDUCTED TO PLANT GROWTH. FOR WASHINGTON THIS IS BETWEEN APRIL 1 THROUGH JUNE 20 AND SEPTEMBER 1 THROUGH OCTOBER 1. SEEDING THAT OCCURS BETWEEN JULY 1 AND AUGUST 30 WILL REQUIRE IRRIGATION UNTIL 5 PERCENT GRASS COVER IS ESTABLISHED. SEEDING THAT OCCURS BETWEEN OCTOBER 1 AND MARCH 30 MAY REQUIRED MULCH OR PLASTIC COVER UNTIL 75 PERCENT GRASS COVER IS ESTABLISHED.
3. REFER TO BMP C120 IN THE STORMWATER MANUAL FOR WESTERN WASHINGTON: VOLUME II FOR FURTHER DETAILS.

SOIL QUALITY GUIDLINES

2014 SWMMW, BMP T5.13

- SOIL RETENTION. RETAIN, IN A UNDISTURBED STATE THE DUFF LAYER AND NATIVE TOPSOIL TO THE MAXIMUM EXTENT PRACTICABLE. IN ANY AREAS REQUIRING GRADING REMOVE AND STOCK-PILE THE THE DUFF LAYER AND TOPSOIL, IF ANY, ON SITE IN A DESIGNATED, CONTROLLED AREA, NOT ADJACENT TO PUBLIC RESOURCES AND CRITICAL AREAS, TO BE REAPPLIED TO OTHER PORTIONS OF THE SIT WHERE FEASIBLE.

- SOIL QUALITY. ALL AREAS SUBJECT TO CLEARING AND GRADING THAT HAVE NOT BEEN COVERED BY IMPERVIOUS SURFACE, INCORPORATED INTO A DRAINAGE FACILITY OR ENGINEERED AS STRUCTURAL FILL OR SLOPE SHALL, AT PROJECT COMPLETION, DEMONSTRATE THE FOLLOWING:

  1. A TOPSOIL LAYER WITH A MINIMUM ORGANIC MATTER CONTENT OF 5-10% DRY WEIGHT IN PLANTING BEDS, AND 5% ORGANIC MATTER CONTENT IN TURF AREAS, AND A Ph FROM 6.0 TO 8.0 OR MATCHING THE pH OF THE UNDISTURBED SOIL. THE TOPSOIL LAYER SHALL A MINIMUM DEPTH OF EIGHT INCHES EXCEPT WHERE TREE ROOTS LIMIT THE DEPTH OF INCORPORATION OF AMENDMENTS NEEDED TO MEET THE CRITERIA. SUBSOILS BELOW THE TOPSOIL LAYER SHOULD BE SCARIFIED AT LEAST 4 INCHES WITH SOME INCORPORATION OF THE UPPER MATERIAL TO AVOID STRATIFIED LAYERS, WHERE FEASIBLE.

  2. MULCH PLANTING BEDS WITH 2 INCHES OF ORGANIC MATERIAL

  3. USE COMPOST AND OTHER MATERIALS THAT MEET THESE ORGANIC CONTENT REQUIREMENTS:
     A. THE ORGANIC CONTENT FOR "PRE-APPROVED" AMENDMENT RATES CAN ONLY BE MET USING COMPOST MEETING THE COMPOST SPECIFICATION FOR BIORETENTION WITH THE EXCEPTION THAT THE COMPOST MUST HAVE AN ORGANIC MATTER CONTENT OF 40 PERCENT TO 65 PERCENT, AND A CARBON TO NITROGEN RATIO BETWEEN 25:1. THE CARBON TO NITROGEN RATIO MAY BE AS HIGH AS 35:1 FOR PLANTING COMPOSED ENTIRELY OF PLANTS NATIVE TO THE PUGET SOUND LOWLANDS REGION.

     B. CALCULATED AMENDMENT RATES MAY BE ME THROUGH USE OF COMPOSTED MATERIALS AS DEFINED ABOVE, OR OTHER ORGANIC MATERIALS AMENDED TO MEET THE CARBON TO NITROGEN RATIO REQUIREMENTS, AND NOT EXCEEDING THE CONTAMINANT LIMITS IDENTIFIED IN TABLE 220-B, TESTING PARAMETERS, IN WAC 173-350-220

SOIL AMENDMENT OPTIONS

2014 SWMMW, BMP T5.13

IMPLEMENTATION OPTIONS: THE SOIL QUALITY DESIGN GUIDELINES LISTED ON THIS SHEET CAN BE MET BY USING ONE OF THE METHODS LISTED BELOW:

OPTION 1: LEAVE UNDISTURBED NATIVE VEGETATION AND SOIL, AND PROTECT FROM COMPACTION DURING CONSTRUCTION.

OPTION 2: AMEND EXISTING SITE TOPSOIL OR SUBSOIL EITHER AT DEFAULT "PRE-APPROVED" RATES, OR AT CUSTOM CALCULATED RATES BASED ON TESTS OF THE SOIL AND AMENDMENT.

OPTION 3: STOCKPILE EXISTING TOPSOIL DURING GRADING, AND REPLACE IT PRIOR TO PLANTING. STOCKPILED TOPSOIL MUST ALSO BE AMENDED IF NEEDED TO MEET THE ORGANIC MATTER OR DEPTH REQUIREMENTS, EITHER AT A DEFAULT "PRE-APPROVED"RATE OR AT A CUSTOM CALCULATED RATE.

OPTION 4: IMPORT TOPSOIL MIX OF SUFFICIENT ORGANIC CONTENT AND DEPTH TO MEET THE REQUIREMENTS.

MORE THAN ONE METHOD MAY BE USED ON DIFFERENT PORTIONS OF THE SAME SITE. SOIL THAT ALREADY MEETS THE DEPTH AND ORGANIC MATTER QUALITY STANDARDS, AND IS NOT COMPACTED, DOES NOT NEED TO BE AMENDED.

Re: 1808-172 Peak Residence

Project Narrative

The project is a significant residential addition. It involves the removal of the entry level walls down to the foundations at that grade and the floor framing above the walk out basement below. The project includes the addition of another story above the current one for a total of 3 stories on the downhill side of the building.

The existing home sits within the 35' buffer of an existing type III watercourse that lies on the neighboring property tpo the west of our site. The project is proposing the use of buffer averaging as a portion of the remodeled area occurs in the buffer, as does the existing home. Many existing building elements in the buffer are proposed for removal with a few being replaced in kind or similarly.

The project storm drainage will be run to the storm line in 80th as requested by the city through the presubmittal process.

The driveway/curb cut will be relocated due to a change in the garage orientation.

The existing home is approximately 3,352sf. The finished home will be 4,370sf before any basement exclusions.

The project will contain a 330sf accessory dwelling unit on the lowest level.

SUBJECT: **Critical Areas Study** - **Watercourse Delineation and Buffer Averaging for: Paek Residence – 2215 80th Ave. SE, Mercer Island, WA Parcel 545230-2145, City File # PRE19-011**

Dear Kevin:

On October 30, 2018 I conducted an initial wetland and stream reconnaissance on the subject property utilizing the methodology outlined in the May 2010 *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region (Version 2.0).* The site is currently entirely developed with an existing single-family residence and associated maintained yard.

Although no wetlands or streams were identified on the property during the site review, one stream (Stream 1) was observed draining from south to north off-site to the west. The ordinary high water (OHW) of this stream adjacent the subject property was delineated on January 3, 2019 and subsequently surveyed.

1.0 EXISTING CRITICAL AREAS

Stream 1 is located within a well-defined historically ditched channel that drains north into a culvert along the south property line of Parcel 531510-1680. The stream was dry during the October 30th site review and conveys only intermittent or seasonal flows.

Vegetation within the riparian corridor of the stream consists of maintained lawn to the edge of the west property line on the site. Vegetation within the off-site portion of the riparian corridor consisted primarily of dense Himalayan blackberry (*Rubus armeniacus*), snowberry (*Symphoricarpos albus*), and English ivy (*Hedera helix*), with scattered Lombardy poplar trees.

Since Stream 1 does not contain fish habitat and conveys only seasonal or intermittent flows, it meets the criteria for a Type 3 watercourse per MICC 19.07.070.A. Type 3 watercourses require a standard buffer of 35 feet from the ordinary high water per MICC 19.070.B.1.

2.0 PROPOSED PROJECT

The standard 35-foot stream buffer currently extends to the western edge of the existing residence. The proposed project consists of a house remodel and a second story addition. A watercourse buffer averaging plan has been prepared for the re-development of the western edge of the house (**Drawings W-1 through W-3**). The area proposed for buffer reduction under the averaging plan currently consists of an existing patio, deck, and stairs and does not provide any functional benefit to the off-site stream. Since no native vegetation would be removed as part of the house addition, there would be no loss of stream buffer function from the expansion project.

2.1 Watercourse Buffer Averaging

The City of Mercer Island may allow buffer averaging if all of the provisions of MICC 19.07.070.B.3 are met:

a. *The proposal will result in a net improvement of critical area function*;

The area of proposed buffer reduction is currently developed, and no native vegetation would be removed as part of the buffer averaging plan. Since the proposal includes planting native vegetation within the buffer adjacent the existing fence line there would be a net improvement of critical area function.

b. *The proposal will include replanting of the averaged buffer using native vegetation*;

A planting plan using native vegetation has been prepared for the area of watercourse buffer located along the fence and includes the area of proposed buffer addition in the northwest corner of the site. Since there will be no vegetation removal as part of the buffer averaging plan, it is our opinion that the entire watercourse buffer does not require re-planting and that the proposed planting plan will adequately increase the stream buffer functions over current conditions.

c. The total area contained in the averaged buffers on the development proposal site is not decreased below the total area that would be provided if the maximum width were not averaged;

As part of the buffer averaging plan, 141 s.f. of buffer area would be reduced and replaced with 141 s.f. of additional buffer in the northwest corner of the site and there would be no loss of buffer area.

d. The standard buffer width is not reduced to a width that is less than the minimum buffer width at any location; and

The proposed buffer width will not be less than the minimum buffer width (i.e., 25 feet) at any location.

e. That portion of the buffer that has been reduced in width shall not contain a steep slope.

The reduced buffer area is not within a steep slope.

3.0 PROPOSED BUFFER PLANTING

Although there would be no loss of buffer function as part of the house project, a mitigation planting plan has been prepared to plant native shrubs within the maintained yard along the west property line (**Drawings W-1 through W-3**). It is my understanding that additional native vegetation is also proposed as part of the overall landscape design for the project. Implementation of the buffer enhancement plan would increase the habitat value of the buffer over current conditions.

Due to the small size of the project it does not appear that long-term performance monitoring should be required. However, if the City determines that monitoring is a requirement, then the following performance standards apply:

3.1 Goal, Objective, and Performance Standard for Enhancement Area

The primary goal of the enhancement plan is to increase the habitat value of the watercourse buffer over current conditions. To meet this goal, the following objectives and performance standards have been incorporated into the design of the plan:

Objective A: Increase the structural and plant species diversity within the enhancement area.
Performance Standard: There will be 100% survival of all woody planted species throughout the enhancement area at the end of the first year of planting. Following Years 2 through 5, success will be based on an 80% survival rate.

Objective B: Limit the amount of invasive and exotic species within the enhancement area.
Performance Standard: After installation and at the end of the fifth year after planting, exotic and invasive plant species will be maintained at levels below 10% total cover in all planted areas.

3.2 Monitoring Methodology

If required, the monitoring program will be conducted for a period of five years, with annual reports submitted to the City of Mercer Island.

Photo-points will be established from which photographs will be taken throughout the monitoring period. These photographs will document general appearance and progress in plant community establishment in the enhancement area. Review of the photos over time will provide a visual representation of success of the plan.

3.3 Maintenance

Maintenance should be conducted on a routine, year-round basis. Contingency measures and remedial action on the site shall be implemented on an as-needed basis at the direction of the consultant or the owner. Tall grasses and weeds shall be removed at the base of plants to prevent engulfment. Weed control should be performed by hand removal.

3.4 Contingency Plan

All dead plants will be replaced with the same species or an approved substitute species. Plant material shall meet the same specifications as originally installed material. Replanting will not occur until after reason for failure has been identified (e.g., moisture regime, poor plant stock, disease, shade/sun conditions, wildlife damage, etc.). Replanting shall be completed under the direction of the consultant, City of Mercer Island, or the owner.

3.5 As-built Plan

Following completion of construction activities, an as-built plan for the enhancement area will be provided to the City of Mercer Island. The plan will identify and describe any changes in relation to the original approved plan.

If you have any questions, please give me a call.

Sincerely,

Exhibit 5 - ESA Memo

memorandum

date	August 5, 2019
to	Lauren Anderson, Planner
from	Jessica Redman, Ecologist
subject	Paek Residence – 2215 80th Avenue SE Critical Areas Review

Environmental Science Associates (ESA) has prepared this memorandum on the behalf of the City of Mercer Island (City). The purpose of this memo is to verify the accuracy of the critical areas study submitted with the development application and to confirm whether the proposed project complies with Mercer Island City Code (MICC) Chapter 19.07 – *Environment*.

The site is located at 42215 80th Avenue SE (King County Tax Parcel 5452302145) and currently contains a two-story house. The entire parcel is generally flat with a slight slope to the northwest. The City critical area maps show a stream as occurring offsite, which flows north through a culvert on the adjacent parcel to the west. Based on online topographic mapping, land outside of the parcel continues to slope to the southwest at a much higher gradient and into a deep ravine. The City critical area maps depict this watercourse as a Type 2 stream, which would be allotted a 50-foot standard buffer per MIMC 19.07.070.B. The proposed project is a single-family residential development that involves removing the existing structure down to the foundation. A new two-story residential structure will be built on the existing foundation and in the current footprint of the existing house.

At the request of the City, ESA reviewed the *Critical Areas Study – Watercourse Delineation and Buffer Averaging for: Paek Residence* (prepared by Altmann Oliver Associates [AOA] and dated April 30, 2019). Our scope of work included review of regulations for wetlands, streams, and their buffers; ESA did not review steep slopes or geological hazard regulations. ESA also conducted a site visit on August 5, 2019, meeting onsite with the applicant and City planner Lauren Anderson.

Report Summary

According to the *Critical Areas Study – Watercourse Delineation and Buffer Averaging for: Paek Residence* (hereinafter referred to as the AOA Report) the buffer of the offsite stream to the west is the only regulated critical area located within the project area. Additionally, the AOA Report disagrees with the City's watercourse typing and instead believes the watercourse should be classified as a Type 3 watercourse. Per MIMC 19.07.070.A, Type 3 watercourses are those with intermittent or seasonal flow, and not used by fish. The AOA Reports states that no flow or fish habitat was observed during their site visit and therefore meets the

requirements for a Type 3 watercourse. Type 3 watercourses are allotted a 35-foot standard buffer per MIMC 19.07.070.B.

The majority of the buffer which occurs on the proposed project parcel contains lawn, unvegetated soils, a deck and stairs, and a concrete patio. Under the proposed new development, portions of the second-floor deck and stairs will encroach into the buffer. To offset these indirect buffer impacts, the AOA Report proposes a watercourse buffer averaging plan that will reduce 141 square feet of the watercourse's buffer. The proposed area of buffer reduction is currently developed and contains portions of the existing deck, stairs, and concrete patio. To compensate for the reduced stream buffer, the applicant proposes to add 141 square feet of additional buffer to the northern extent of the buffer. This area will subsequently be planted with native shrub species. Additionally, the applicant also proposes installing 187 square feet native vegetation as stream buffer enhancements, along the eastern side of the fence.

Per MICC 19.07.07(B)(3), the City allows buffer averaging if the following conditions are met:

- The proposal will result in a net improvement of critical area function;
- The proposal will include replanting of the average buffer using native vegetation;
- The total area contained in the averaged buffers on the development proposal site is not decreased below the total area that would be provided if the maximum width were not averaged;
- The standard buffer width is not reduced to a width that is less than the minimum buffer width (25 feet) at any location; and
- That portion of the buffer that has been reduced in width shall not contain a steep slope.

Due to the small size of the project, the AOA Report states that a long-term monitoring plan should not be required. However, if the City disagrees, the report presents goals, objectives, and performance standards that the project should meet.

Review and Site Findings

ESA and City staff observed the watercourse from the project parcel during the August 5, 2019 site visit. The watercourse appeared to be a ditched channel that was dug to primarily convey stormwater. No flow was observed during the August site visit. Stream substrate was primarily soil and no fish habitat was observed. Based on the stream characteristics and the location of the parcel near the start of a deep ravine, we also agree that the stream would not support fish and therefore, is a Type 3 watercourse, which would be allotted a 35-foot buffer. ESA did not view the ordinary high water mark (OHWM) of the stream, and therefore, could not locate the exact edge of the buffer in the field. However, the majority of the residence's yard was considered to be in the 35-foot buffer as shown in design drawings provided by the applicant.

During the August 5, 2019 site visit, ESA observed the area of proposed buffer reduction and addition, as well as the proposed area of buffer enhancement. The area of buffer reduction was confirmed to be largely developed. The area of proposed buffer addition as well as the area of buffer enhancement were covered with either grass or bare soil with little native vegetation. No other critical areas were observed on site.

Based on our review of the AOA Report and MICC, as well as the site visit, ESA concludes the proposed buffer addition and enhancement with native plantings will improve buffer conditions at the site and result in an ecological lift in functions. We also agree that due to the small size of the project, annual monitoring of the site should not necessarily be required. However, we recommend that the plants be monitored twice, approximately one year after plant installation (to determine survival and replacement) and five years after plant installation to ensure the mitigation actions of the project are a success.

Therefore, we believe the proposed project has met all requirements for buffer averaging under MICC 19.07.07(B)(3) and is compliant with MICC Chapter 19.07 – *Environment.*
