

10/24/2023

Dear Mercer Island Permit Representative/ building department:

This is a request for permit approval for Ram Jack to install piers to stabilize and lift the foundation on the northwest corner of our house during the rainy season between October through April 1.

We have moved out of our home so the foundation work can be done. After several weeks of the foundation work has been completed, the tiling and flooring on both levels of our house will need to be replaced as Ram Jack will drill and inject structural foam through the 1st level floor slab to make it level. We are also anticipating the lifting of our foundation will cause cracks in the flooring of our 2nd (main) floor and replacement will also be required. Some windows may break during the process and will need replacement as well.

To allow us back into our home as soon as possible and not cause unnecessary delay of about five months (November to April 1) before any work can begin, please approve the permit to allow work to begin during the rainy season. As the report from Cobalt Geosciences shows, there is very low risk with the associated work.

Sincerely,

Christopher Lee
Home Owner, 206-498-8813
