**Date:** December 15, 2017 at 1:57:31 PM EST  
**To:** William Summers <[bill@summersdevelopment.com](mailto:bill@summersdevelopment.com)>

Bill,

The cost of installing a shoring wall is \$100 per square foot of wall.  
The wall length should be the width of the house plus 10 more feet on each side.  
The height of the wall will be up to 18 feet facing the house and tapering down on each side.  
The mobilization cost of an augercast drill rig crane is about \$10,000.  
The mobilization of a tract auger is less but then they will have to use casing for each hole due to potential caving and groundwater seepage issues.
