6e. Describe how you plan to construct each project element checked in 6d. Include specific construction methods and equipment to be used. [\[help\]](#)

- Identify where each element will occur in relation to the nearest waterbody.
- Indicate which activities are within the 100-year floodplain.

Install a translucent canopy on an existing freestanding boatlift. This is an extension upward of an existing structure. Although the proposed canopy is not entirely inside the moorage triangle, it is within the confines of the existing pier. The most waterward edge of the canopy will be less than 100' from the OHWM as allowed by Mercer Island code. It will not constitute a hazard to the public health, welfare and safety, or be injurious to affected shoreline properties in the vicinity as it is within the footprint of an existing pier. The canopy is greater than 27' from adjacent lateral lines (LL) extended into the water and greater than 43' from adjacent piers. The canopy constitutes a lower impact on abutting property owners as it will be 30' further waterward than if it were situated within the moorage triangle, which will reduce the visual impact on abutting property owners. The proposed canopy is not in conflict with the general intent and purpose of the SMA and development code as a translucent canopy is an allowed development within 100' of the OHWM. All activities take place in Lake Washington.

6f. What are the anticipated start and end dates for project construction? (Month/Year) [\[help\]](#)

- If the project will be constructed in phases or stages, use [JARPA Attachment D](#) to list the start and end dates of each phase or stage.
