

Kirtman/Vashee Pier Repair

Project Narrative

Repair an existing pier by splicing 35 wood piles. Install two steel mooring piles.

We are requesting that the mooring piles be reviewed under the development standards in 19.13.050 F. 1. viii. Only two mooring piles are being proposed and they will be installed at least 30' waterward of the OHWM with them being spaced to sufficiently tie up a larger boat and located as far waterward as possible to accomplish this.

The mooring piles are exempt from shoreline substantial development per WAC 173-27-040 (2) (a) as they will cost less than \$7,046.

We are requesting that the pile repairs be reviewed under the development standards in 19.13.050 F. 2. The piles will be spliced with untreated wood.

The pile repairs are exempt from shoreline substantial development per WAC 173-27-040 (2) (b) as it is normal maintenance and repair of an existing structure.
